Research Interests

My research investigates the interplay between policy, financial systems, and the macroeconomy. I am particularly interested in the interaction of fiscal and monetary policies and their impact on economic outcomes. My work is organized around three key areas:

Macroeconomic Policy & Stabilization:

Analyzing the transmission mechanisms and effectiveness of monetary policy, alongside fiscal policy, in managing economic growth, inflation, and investment. Also exploring how economic uncertainty and FinTech developments challenge traditional policy frameworks.

Public Finance, Growth, & Financial Stability:

Studying the role of public finance—including taxation, government expenditure, and sovereign debt—in long-term growth and financial market stability.

International Trade & Capital Flows:

Assessing how trade policies, tariffs, and fiscal incentives shape global trade patterns and capital flows. Examining the fiscal and macroeconomic consequences of trade barriers, protectionism, and shifts in global value chains.

Teaching Interests

My teaching interests complement my research and span the theoretical, empirical, and policy-oriented foundations of economics.
